On the Cover –
Cell phones, laptop computers, and personal digital assistants are all parts of the technology revolution that are becoming more and more common in everyday life. But instant access can also bring information overload. Dr. Jeff Myers examines the blessings and problems of our high-tech world.
In the past ten years, technology has profoundly changed the way I communicate. The shift was gradual: in 1992 my graduate school began encouraging students to use e-mail to share ideas with a vast network of scholars (unfortunately for the world of ideas, I used it mainly to correspond with my bride-to-be). In 1994 I discovered the Internet and loved how it put hard-to-find information at my fingertips, reunited me with long-lost acquaintances, and allowed daily interaction with people around the globe.

E-mail and the Internet have transformed my life’s work. Whereas my newsletter used to cost $5,000 per issue to print and mail, I can now communicate with 7,000 subscribers through e-mail for less than $10. My on-line bookstore provides a significant source of revenue to fund my leadership training ministry.

Communication technology has taken my teaching to a new level as well: my current and former students interact through an on-line bulletin board. Technologically advanced classrooms at Bryan offer access to in-class Internet and a vast array of televised educational programs. I’ve even used telephone-conferencing technology to bring world-renowned experts to class.

Moreover, technology has brought family closer. My nationwide cell phone makes it possible for my wife to reach me anytime, anywhere. Parents, siblings, aunts, uncles, and grandparents trade family photos through e-mail and send electronic greetings.

Yet I’ve stopped seeing communication technology as a “miracle cure.” Here’s why:

**Why Technology is Not the Miracle Cure**

Technological innovation makes communication easy, fast, and cheap. Most people are well-acquainted with its marvels, but what of its snare? Consider the following:

- E-mail offers more frequent communication, but the messages are less substantive because the attention span of e-mail readers is short.
- Cell phones are useful, but doesn’t it trouble you to see people walking around in a daze, ignoring everyone except the invisible person they’re conversing with?
- Television offers hundreds of channels to choose from, yet these vast selections allow them to remain grossly uninformed about what is happening outside their narrow interests.
- The Internet, for all its power, is home to the most shocking filth that perverse minds can conceive.
Technology changes the way we think and communicate. It offers enormous potential for good, but it also tempts us to do evil. Some of these temptations are more obvious, such as on-line pornography. Others are more deep-seated, so we tend to not see their dangers until it is too late.

How Communication Technology Tempts Us

1. Technology tempts us to think less about what is really important. Four years ago Prof. John Sommerville from the University of Florida wrote a book called How the News Makes Us Dumb. His thesis: The sheer weight of information we must manage each day makes it nearly impossible to discern what is right, true, and significant.

In Nineteen Eighty-Four George Orwell bemoaned the destruction of words as feeding ignorance and making the world ripe for totalitarianism. What Orwell could scarcely have imagined was that it would become impossible to communicate about important things, not because of a lack of words, but because people had lost sight of what really mattered.

2. Technology tempts us to isolate ourselves from one another. On the surface, technology seems to facilitate communication. Yet it can actually divide us by helping us avoid those who are “not like us.” The vast array of television channels and on-line forums make it possible to interact only with those who have the exact same interests as we do.

Granted, it’s a welcome relief to feel understood by people who are a lot like me. When I stop communicating with those who are different, however, I am impoverished. True communication should change us. The only way to avoid changing things, or being changed, is to stop communicating. Regrettably, this is exactly what is happening:

Rather than shopping at the corner market, people roam the aisles of 24-hour mega-stores hardly making eye contact with others.

Neighbors move from the front porch to the back deck, from the parlor to the TV room.

Music becomes a means of isolating rather than uniting people.

Political groups stop cooperating for the common good and devolve into vicious attacks.

Civilization cannot long survive this fragmentation. The cry of the populace is, “Leave me alone.” Perhaps the ultimate hell is that the wish will be granted. It is not unlikely that our own nation will collapse not through an explosive roar, but through a deafening silence.

3. Technology tempts us to be superficial. God designed person-to-person communication to be profoundly meaningful. Father Walter Ong has said, “It is through the spoken word that we can enter the highest level of intimacy with others, beyond physical union, into the heart and mind of the other.”

Communication technology permits us to observe more and communicate less. Our communication ability is anemic; but even to this technology offers a remedy. Do words fail you? You can borrow some clever lines from a movie, or rely on a greeting card manufactured by a professional writer of emotion, or fill in the blanks in a pre-formatted letter.

As we become more superficial, we lose the deep sense of memory that guides our interactions and informs our collective consciousness. Librarian of Congress James Billington has noted that if we lose our sense of the past, we lose our self-identity to a “world of motion without memory.” This, he point-
ed out soberly, is one of the clinical definitions of insanity.

4. Technology tempts us to do evil. To some, technology is an object of worship. Secular humanist philosopher Paul Kurtz wrote in the Humanist Manifesto II,

We have virtually conquered the planet, explored the moon, overcome the natural limits of travel and communication; we stand at the dawn of a new age.... Using technology wisely, we can control our environment, conquer poverty, markedly reduce disease, extend our life-span, significantly modify our behavior, alter the course of human evolution and cultural development, unlock vast new powers, and provide humankind with unparalleled opportunity for achieving an abundant and meaningful life.

It didn’t seem to occur to Dr. Kurtz that technology could actually feed humankind’s destructive tendencies, but that is exactly what has happened. The Nazis were among IBM’s first customers, using rudimentary computers to streamline their genocidal plans. Nuclear research promised energy in abundance but resulted in bombs powerful enough to obliterate all living things. Movie studios released beautifully produced films that were morally decrepit, dumbing down the conscience of a nation.

Industry pioneers fantasized that communication technology would bring global harmony. The reality, however, is quite the opposite. Nations the world over have used technology to communicate dehumanizing messages such as, “Jews are not persons,” “Babies are not persons,” and “Those who resist communism are not persons.” The consequences? According to historian R. J. Rummel, almost 170 million persons were killed at the whim of governments in the 20th Century alone.

Rather than unlocking human potential for good, technology has handed sinful humanity the keys to our own destruction. Our need for redemption has never been more profound.

The Redemption of the Word

How can Christians reach others for the Kingdom in a world beset by such temptations? The answer is found in John 1:1, “In the beginning was the Word.” The Greek word for Word is logos, which means “a thought expressed.”

When the “logos” is rejected, people lose the ability to communicate deeply with others.

Because God is a communicative God, however, we can use words to create, to encourage, to build community, to reach out to those who are isolated by the fallout of a postmodern society.

We must use technology appropriately. We must ensure that our time on the Internet or watching television does not squeeze out personal investment in the lives of others.

We must take specific steps to protect ourselves and our families from a lack of discernment. This fact was reinforced when I took my son on a cross-country airline flight. An inappropriate video came on the screen and I asked him to avert his gaze. After a few moments he blurted, “I just can’t keep my eyes from looking at it.” The images were riveting. They were also poisoning his soul and mine. We must be very, very careful about what we allow our minds to absorb.

We must speak up for truth and righteousness, and use words to fight against evil and injustice. As communication scholar Quentin Schultze points out, our communication suffers from the sin of omission. Scripture commands us to speak up for the powerless, and we are not excused from this responsibility just because the media obscures the difference between right and wrong.

We must learn to speak a “word in season.” Proverbs 15:23 (NIV) says “A man finds joy in giving an apt reply—and how good is a timely word!” We must replace lying, gossip, and verbal abuse with words of blessing, expressing the grace we have received from God to a world in desperate need of hearing the voice of truth.

We must break the silence about what is truly important. We cannot rely on the media and technology to offer a proper perspective on what is true. Historian John Hallowell noted, “Only through a return to faith in God, as God revealed Himself to man in Jesus Christ, can modern man and his society find redemption from the tyranny of evil.”

Speak Up With Confidence!

Let us never forget that Christianity has given us hospitals, civil liberties, abolition of slavery, modern science, the elevation of women, regard for human life, great works of art and literature, workable systems of justice, education for common people, the free-enterprise system, and much more. When we see the good that results from applying God’s principles, and the horror that results from rejecting them, it seems cruel and irresponsible to remain silent. St. Augustine was right: those who are citizens of God’s kingdom are best equipped to be citizens of the kingdom of man. And that is just as true in an Internet café as it is in the remotest parts of the earth.

Jeff Myers, Ph.D. is assistant professor of communication arts at Bryan College and director of Summit Ministries in the eastern U.S. He speaks to more than 20,000 people each year in leadership training camps and conferences. Visit his website at www.inspiredleadership.com. ☞
Out of Iowa comes a style of music that takes away more than your breath. It takes away your soul. The death metal rock group, Slipknot, is the quintessential nihilistic, depersonalized entertainment. Don't think they occupy the fringes of pop entertainment—teenagers buy Slipknot CDs by the hundreds of thousands (earning them platinum status) and the group has been nominated for a Grammy award.

The nine members of Slipknot wear hideous, nonhuman masks when they perform. They show their disdain for individuality by eschewing their personal names and designating themselves by numbers: 0, 1, 2, 3, 4, 5, 6, 7, and 8. Their first album released in 1996, Mate. Feed. Kill. Repeat., unveiled their serious desire to take the despair of nihilistic rock a step further. Their songs include “Wait and Bleed,” “I am Hated,” “My Plague,” and “Everything Ends.”

Slipknot fans are called maggots. They are fiercely loyal to the group and have titled their growing numbers and intense devotion as “spreading the sickness.” A number of fan websites caution, “Unless you are willing to die for Slipknot, don’t even think about entering this site.”

Are the members of Slipknot aware of the frenzied dedication of their fans? Sure they are. Mic Thompson (aka #7) said recently, “Here’s what’s cool, though: In the end, I own your *** children. Say what you want, I can tell your kids to *** kill you in your sleep, and they will.”

What is going on here?

American Culture: Losing Face?

Slipknot did not create the tragic depersonalization that is slowly gripping the American psyche. Their style and attitudes are drawing energy from many sources. John Sullivan, English professor at the University of Virginia, claims that we are a society taken over by technology and entertainment, a phenomenon he calls “depersonalized intimacy.” We are on the edge of a culture that makes it possible never to deal with real people. The computer, the Internet, and communication technology are recreating us. We can go to school (and get accredited degrees), party and converse (in internet chat rooms), and browse and buy (in thousands of on-line stores) and never look another person in the face. We know more about our favorite actor on television than we do our neighbor next door.

The ambivalence most of us have toward technology is no longer neutral as we move toward a decisive moment. What kind of people are we becoming? On one hand, we have incredible, instant access to wide-ranging information. On the other, nothing that dignifies us as humans can be found spending hours in front of a computer screen or television set. In fact, the growing danger of depersonalization is made worse by these activities.

Why is depersonalization dangerous, you ask? We have lived in a burgeoning culture where we have become more and more impersonal. But depersonalization is more menacing. To be impersonal is to ignore the dignity of a person as an individual. To depersonalize is to remove any value a person has as a human being. It is to reduce them to the status of a thing. The symptoms of depersonalization are more than troubling.
Three Ugly Faces of Depersonalization

One obvious face of depersonalization in society is seen as a manifestation of hate, particularly in bigotry and racism. To hate a group of people because they differ in race, ethnic background, or belief is most easily effected when we depersonalize them. Depersonalization makes it easier to stereotype others - to take away their names, their histories, and their faces - and to tolerate hate, abuse, and even persecution. Hitler depersonalized the Jews and Nero the Christians. In our own country we have seen extreme examples of depersonalized hatred toward African Americans, Hispanics, Asian Americans and... well, the list is sadly long.

Depersonalization is also seen in lust, where pornography is the most blatant example. Pornography depersonalizes a woman, for example, by making her into an object of sexual desire. Donald DeMarco notes, "Pornography is not interested in the face, through which personality shines, but the objectivized and dehumanized body. Pornography represses personality and exalts the depersonalized, dehumanized body."

Tragically, depersonalization appears as despair. Many who isolate themselves from intimate contact with others suffer depression and a loss of meaningful pursuits in life.

The end result of depersonalization is a dreadful view of the value of human life... even our own lives. The specter of Columbine or serial killers hovers over our culture.

"It is easier for us to see each other only as strangers, or stereotypes. The serial killer stalks stereotypes," writes Shirley Lynn Scott. In addition, "It's the anonymity factor," said serial killer Ted Bundy on the ease of killing.

"We are creating strangers of each other," says Steven Egger. "As we become strangers we begin to see others more as objects and less as human beings."

Our Face, God's Face

The biblical worldview screams that each individual has infinite value in the sight of God. Nicholas Berdyaev writes, "Every single human soul has more meaning and value than the whole of history with its empires, its wars and revolutions, its blossoming and fading civilizations."

C. S. Lewis says it even more clearly, "You have never talked to a mere mortal. Nations, cultures, arts, civilizations — these are mortal, and their life is to ours as the life of a gnat. But it is immortals whom we joke with, work with, marry, snub, and exploit — immortal horrors or everlasting splendors."

Beyond our individual personal value in the sight of God, the Scriptures are clear that we need each other. We find our greatest joys in community where our strengths are encouraged and our weaknesses are endured (Romans 15:2-3; Philippians 2:3-4; 1 Peter 1:22).

Technology will grow into a serious problem only if we allow ourselves to be defined by its structure. The great danger is to think that modern culture must adapt to technology. G. K. Chesterton boldly argues, "The huge modern heresy is to alter the human soul to fit modern social conditions, instead of altering modern social conditions to fit the human soul."

Living out the biblical worldview will make depersonalized icons such as Slipknot a novelty rather than the center of attention. The followers of Jesus are not "maggots" but children, friends, and family. We don't have to die for Him to show our allegiance. He already died to give us life. That makes me feel like somebody special and I can't help but tell everyone how special they are too.
THE SPORTS PAGE

LIONS’ MEN’S BASKETBALL:
SENIORS PROVIDE LEADERSHIP FOR YOUNG BASKETBALL TEAM

"Ups and downs" might best describe the Lions’ men’s basketball season as the young squad gained valuable experience under the leadership of the team’s three seniors.

One of the “ups” certainly was a race through the AAC tournament, with the Lions defeating No. 1 seed and nationally ranked Brevard and the University of Virginia at Wise before falling to Bluefield in the final.

"This could have been a disastrous season given our youth, inexperience, and lack of size. But we scored more than I thought we could, and this has been one of the better offensive rebounding teams we've had since I've been here. We spent most of the year in the top 10 in the country in three-point percentage," Coach Morris Michalski explained.

Despite a 15-20 record, Coach Michalski said there have been some encouragements such as beating nationally ranked and conference leader Brevard College twice and defending conference champions Milligan.

Another encouragement is that the Lions have been competitive in all but five of their losses. "We lost 12 games by 10 points or less," he said. "That indicates we have been in the ballgame and very competitive. We won seven real tight ones too."

The coach said he especially appreciates the leadership and efforts of the team’s three seniors, Jared Jones, Aaron Braun-Duin, and Michael Carter. "For us to be halfway good, we had to be overachievers, and these three certainly set the example. They had a positive effect on the other guys."

Coach Michalski also tagged sophomore Chris Travis for recognition. "What a meteoric rise this young man had. What a thrilling scorer and true sparkplug he became. Chris added maturity and polish to his game and everyone has benefited. It’s a rare honor for him to be chosen All-Conference as a sophomore."

The three seniors will be lost to graduation this year, but he is excited about the contribution three freshmen – Josh Lacy, Brandon Gordon, and Michael Stone – have made already. "What they have shown me makes me believe they have a great career ahead of them here." He also has high hopes for junior Brett Wright for next season; "He has the potential to become the dominant point guard in our league next season."

Coach Michalski also is excited that seven of his players (see related story) were named to the Academic All-Conference team, and possibly to the NALC’s Academic All-American squad. "That’s really significant when half the team has that kind of academic strength," he said.

TELEVISION BUILDING ON EXPERIENCE

Bryan’s tennis teams were looking forward to the 2002 season as they prepared for the start of league play in February, Coach Bob Andrews said.

The men’s and women’s teams will be building on experience gained last year and are expecting help from several new players, he said.

Four returning sophomores – Courtney Roberts, Heidi Seera, Katie Lettman, and Silvia Ayala – will be joined by three players new to the women’s team. Dr. Andrews said Kimberly Dyer, Melissa Myers, and Megan Sherrin will add strength to the squad.

"We have good depth this year," Dr. Andrews said. "The girls have about equal ability. This should give us a realistic shot at a better than .500 season." A year ago, the women had a 2-9 record.

"Their attitudes and spirits are good, and I think we’ll see positive results," he said.

For the men, returning players Carlos Ayala, Kent Suter, and Ross Hubler will give the team a boost at the first three positions. "Carlos did well at No. 1 last year," the coach said. "He can play with anybody. And he and Kent will give us a strong doubles team."

Dr. Andrews is expecting immediate help from freshmen Andrew Bauman, Terry Hill, and Josh Long. Reid Daniels also should make a contribution when he joins the team after basketball season.

"The guys definitely should finish .500 or better," the coach said. "I think they will be competitive with everybody."
Lady Lions Basketball

Contend for Conference Title

A heart-breaking loss in the AAC Tournament semifinals ended the Cinderella NAIA season for the Lady Lions basketball team as the team compiled a best-ever 25-8 record and a third-place conference finish.

But the Lady Lions went on to win the NCCAA Mid-East Regional championship and a berth in the NCCAA national tournament in early March. First-year Coach Jim Arnold, who won AAC Coach of the Year honors, said this year’s success was a combination of returning players with playoff experience, strong leadership from three new players, and hard work by the whole team.

“The girls felt like they had momentum after beating Covenant in the playoffs last year,” Coach Arnold said. “That gave them the confidence to believe they could compete with the best.”

Senior transfer Becky Blesch and freshman sisters Sarah and Liz Bass brought an offensive one-two-three punch, tossing in an average of more than 50 points per game between them, as well as strong defensive statistics to provide an extra spark for the team. “They all have been nominated for All-Conference honors,” the coach said. “The conference coaches feel they are three of the best 15 players in the conference.”

In addition, Katie White, Kate Strunk, and Stephanie and Valerie Huttenhoff have provided valuable support to the team effort.

“The girls came in in good shape and have worked hard. They were ready to go forward right away,” Coach Arnold said. “Their effort level, combined with their talent, has really paid off.”

One of those pay-offs came in December when the Lady Lions defeated Alice Lloyd on the road, the first time they had beaten Alice Lloyd. Then in a week’s time in January, the Lady Lions beat nationally ranked Brevard College, King, Alice Lloyd, and Covenant.

The strong showing this year has set a high mark to live up to, but Coach Arnold is excited about the prospects for the future. “We started two freshmen, two sophomores, and a senior, so we are a young team,” he said. “We’re losing Becky (Blesch) to graduation. In my opinion, she’s the best player in the conference. She’s a spiritual leader on the team, as well as the floor leader. She’s hard to replace as a player and as a person.”

“But I feel like all the girls have done a great job. Everybody is supposed to be back, and we have some young people I’m looking at who would be quality players and students.”

Basketball Honors

Women’s Basketball

Jim Arnold, AAC Coach of the Year
Liz Bass and Sarah Bass, Freshmen of the Year
Becky Blesch, Liz Bass, and Sarah Bass, All-Conference Team
Becky Blesch, Kimmie Hill, Valerie Huttenhoff,
Kate Strunk, Katie White, All-Academic team

Becky Blesch, NCCAA Mid-East Region Player of the Year

Men’s Basketball

Brandon Gordon, Josh Locy, All-Freshman Team
Chris Travis, All-Conference Team
Josh Locy, Jordan Musselman, Jared Jones,
Michael Carter, Jeff Rohman, Michael Stone,
Aaron Braun-DuIn, All-Academic Team

Now Accepting Devotional Manuscripts for a VOLUME II Publication

Deadline: June 1, 2002
Length: 500-700 words including scripture verse
Copy: 3.5 floppy or e-mail to hillte@Bryan.edu

If you have any questions call Terry Hill at 800.55BRYAN or 423.775.7308

The tennis team include, Myers and Katie. Di Seena, Courtney, Kimberly Dyer and pictured is Silvia Ayala.
Alumni Matter

Mail Box

In an effort to raise funds for current student scholarships, Bryan College offered to its alumni a once-in-a-lifetime opportunity to purchase the solid bronze mailbox door, complete with the original box number, that they were issued during their years as a Bryan student.

The mailboxes could be framed in a mahogany display shadow box along with a plaque, which stated the history of the mailbox and the name and class year of the alumna/alumnus.

To date, your Alumni Ministries Office has shipped over 240 mailboxes to grateful alumni around the country. We have been inundated with letters and phone calls expressing appreciation for the chance to own such a unique piece of Bryan College history.

Many boxes were given as Christmas gifts and were received with tears of joy and adulation. In turn, their joy has helped raise nearly $14,000 for deserving young men and women to continue in their biblical worldview education at Bryan College. For your generosity, we are extremely grateful!

We have a few boxes left to offer to our alumni. If you would be interested in giving a tax deductible gift to help a current student “finish the course,” we can still send you, as a gift, your college mailbox or have an existing box retrofitted with your personal box number. Boxes will be assigned on a first come, first serve basis. Once they are gone, they are gone forever.

Please call the Alumni Ministries Office at 1-800-55-BRYAN to make your gift now.

Technology: More Than a Game to Jim Wolfe

A business administration degree doesn’t necessarily lock a graduate into a banking or sales job, Jim Wolfe, ’78, has learned.

Jim is principal and operating partner of a graphic design and marketing company that takes a high-tech approach to meeting a client’s communications needs. Those clients have ranged from Bryan College – enjoying the fruits of Brainstorm Design’s labors on its website – to international Fortune 500 companies.

Brainstorm is a graphic design and marketing company, Jim explained. “We can develop communication programs in all kinds of media – print, electronic, or web-based – and integrate the components.”

The seven-year-old company is not Jim’s first entrepreneurial adventure. He started and sold two companies before Brainstorm, striking out on his own after time in banking and marketing in the communications industry.

“I was not a finance major, but I learned how to think at Bryan,” he said. “I got more training as I went along, but I really believe that while at Bryan I was coached into how to think.” He cited Dr. Robert Spoor, professor emeritus of history and social science; Dr. Bill Ketchersid, professor of history; and former English professor Jerry Sawyer as key to his intellectual development.

From his perspective, running a business is running a business. “Technology is new and exciting, but it’s just a business,” Jim said. “I’m not a computer engineer. I see myself as operating a business that has a technical side to it.”

And while it’s a business in a popular field, he said his firm tries to be careful to ensure it is meeting clients’ needs, not just technological daydreams. “If someone says, ‘I just have to have a website,’ I wouldn’t work with them. If they haven’t thought through the technology – if it’s just like them carrying a Palm Pilot they never use – they’re not our kind of client. They need to think, ‘How does this solve a problem?’ to help their business, not-for-profit organization, or ministry achieve its mission.”

Technology may pay the bills, but Jim says his life is much more than his job. When he’s not at work, he’s taking care of his “core personal mission – being a husband and a dad.” He and his wife, Pattie (Davis), ’79, are parents of Brittany, 16, Lindsey, 14, Geoffrey, 12, and Hillary, 10. He also serves as a deacon and worship leader at his church, works with the family and sports programs of Shepherd Community, an inner-city ministry in downtown Indianapolis, and is chairman of the board of Cornerstone University.

When time permits, he also likes to drive his motorcycle.

Not only did Jim leave Bryan with an education, he met his wife here. “Technology is not Pattie’s thing – she’s a very gifted teacher – but she has been so supportive of everything I have done. I never would have been successful in life without her. One of my great take-aways from Bryan College is a godly wife.”
to participate in many of the missionary activities. Cliff preached one Sunday while Beth translated into Portuguese and another translated into Cindau.

**60's**

**LOIS (TABER), '63,** and Dwight BAKER have moved to New Haven to join the staff at Overseas Ministries Study Center. They are part-time hosts for the individuals and families, mainly international, who live in one of OMSC's apartment buildings; these are people involved in church leadership worldwide.

FRANCES (HOUGE) CHEERS, '60, of Dayton, Tenn., passed away Jan. 28.
Federal judge orders halt to BEM classes

Bryan’s 50-year-old Bible Education Ministry (BEM) was ordered out of Rhea County elementary schools Feb. 8, when a federal judge granted a motion for summary judgment in a suit brought by two local parents and a Wisconsin organization.

Judge R. Allan Edgar granted the motion by the Freedom from Religion Foundation and the two parents, who have been listed as “John Doe” and “Mary Roe,” 11 days before the case was to be heard in his Chattanooga courtroom.

The suit alleged that the BEM classes were being taught “devotionally” in violation of the constitutional prohibition of establishment of religion.

However, Bryan President Dr. William E. Brown disagreed. Dr. Brown said the classes were taught to familiarize students with the content of the Bible, not to impose a sectarian viewpoint. “Every educated person needs to know what’s in the Bible,” he said. “It’s the foundation for western culture.”

Rhea County Board of Education Chairman John Mincy said in response to the judge’s ruling, “I don’t feel like we’ve had our shot. We haven’t had our day in court yet. We’re dedicated to this cause. We’re dedicated to keep (the BEM program) in Rhea County schools.”

The college, which was not named in the suit, will support the school board’s final decision in the matter, Dr. Brown said. He also suggested that the BEM curriculum might be modified to a character education program that already is being taught at Dalton City School.

The school board voted to appeal the ruling and seek a full hearing on the issues in the case at its February meeting.

Nearly 100 Bryan students gathered at the Rhea County Courthouse during the college’s day of prayer in February to pray for needs of the community. Students prayed for wisdom for local officials about the Bible Education Ministry lawsuit along with other county concerns.

Dr. David J. Masoner named Senior V.P.

Academic Vice President Dr. David J. Masoner has been named senior vice president of the college effective July 1. President Dr. William E. Brown has announced.

Dr. Masoner, academic vice president since 1995, will assume duties including major donor relations while maintaining oversight of the college’s admissions office. In addition, he will offer administrative support to the president.

The college has begun a search for a new academic vice president, and hopes to fill the position by the beginning of the 2002-03 school year.

“Dr. Masoner has provided solid leadership in the academic area and now he will be using his years of experience to continue moving Bryan College ahead,” Dr. Brown said in announcing the change. “He has worked with foundations, state legislators, and business executives so he has the savvy to continue to represent Bryan well.”

“I’m excited about this opportunity,” Dr. Masoner said. “I strongly believe in the educational work Bryan is doing, and in the positive impact the college makes in the lives of young men and women. I look forward to a new way to contribute to strengthening and expanding Bryan’s program.”

Dr. Masoner came to Bryan from the University of Alabama where he was chair of the higher education program and director of the institute of higher education.

Center for Law and American Government

Bryan College will open the Center for Law and American Government under the direction of Tenn. State Sen. David Fowler, Dr. William E. Brown has announced.

Dr. Brown said this is a step toward having Bryan College offer a “distinctively cutting-edge program on a biblical understanding of the relationship between law and religion. It’s exciting to have people who are engaged in the political process to encourage our students to do what William Jennings Bryan did – take stands from a distinctively biblical outlook.”

At the same time, Sen. Fowler will develop a symposium for state legislators from around the country to come to Bryan College for several days to discuss from a biblical perspective the principles that underlie many issues they confront.

Sen. Fowler also is developing a course in American political philosophy as part of Bryan’s new political science major.

“This is an opportunity for our students to interact with somebody who thinks like them who is in a political position of influence,” Dr. Brown said. “I believe it will be energizing for Sen. Fowler to interact with our students as they challenge each other in the classroom.”
Fifty percent of young people who claim to be Christians when they enter college claim not to be Christians when they graduate.

Don't be a statistic. Be a Leader!

The Summit at Bryan College will train high school and college students ages 16-21 to defend their Christian faith and equip them with the skills they need to make a difference in the world.

Instructors: Jeff Myers, Director, Summit at Bryan College
